---

## Certification Scope

---

Once acquainted with the content of the Certification Kit, users should develop their software processes based on the certification credits proposed in the Certification Kit. Esterel Technologies is ready to assist its customers in defining their certification processes and needs through consulting services.

Project plans for the user application must specify the development and verification methodology with SCADE Suite KCG and express the claimed certification credits in compliance with ISO 26262 safety objectives.

### Access to Software Life Cycle Data

Certification Kits are a subset of certification data. Customers that have the Certification Kit, as well as their certification authorities, can access all SCADE Suite KCG software life cycle data on site at Esterel Technologies upon request for certification audits purpose.

All KCG certification data are available for audit, including design, verification cases and procedures, verification results, software configuration management and software quality assurance records.

#### ISO 26262-6:2011 TÜV SÜD Certificate

TÜV certificates ensure that the components have been audited by an independent certification body. Request from Esterel Technologies your ISO 26262 certificate in electronic format for [KCG](#).

---

## Certification Kit Data

---

Each ISO 26262 Certification Kit for SCADE Suite KCG includes the following documents:

- **Compliance Analysis with ISO 26262-6:2011 Standard:** Presents the compliance of KCG with ISO 26262 objectives at ASILs D and C or ASILs B and A
- **Safety Plan:** Details KCG safety activities
- **Tool Qualification Plan (TQP):** Presents all provisions taken for the qualification of KCG Code Generator and references the other project plans
- **Tool Operational Requirements (TOR):** Describes the KCG functionality and usage
- **Scade Language Reference Manual:** Contains the language requirements
- **Safety Case (SC):** Provides evidence that KCG is developed with the appropriate level of safety and identifies the Conditions of Use to be obeyed by KCG users for claiming the certification credits of the tool
- **Tool Configuration Index (TCI):** Presents the tool version and configuration
- **Tool Life Cycle Environment Configuration Index (TECI):** Presents the software environment used for tool certification
- **Software Installation Procedure (SIP):** Contains detailed instructions for installing KCG

---

---

## Certification Kit Management

---

- Esterel Technologies' support team sends regular Safety Status Reports that complement the Certification Kits by giving the list of all open problems and their mitigation actions in SCADE Suite KCG known at report publication date. These reports are also available on our [Support web site](#).
- Updates to the Certification Kits and Safety Status Reports are provided to customers under maintenance service

---

---

## Certification Environment

---

Users must use SCADE Suite KCG in the same environment as the environment used for certification. The Certification Kit applies to the following environment:

- SCADE Suite KCG 6.4 certified on Windows XP SP3 (32-bit) and Windows 7 SP1 (64-bit)

---

---

## Certification Consulting Services

---

To help customers with certification activities, Esterel Technologies can provide specific consulting services like:

- Certification liaison support for tool certification
- Setting up SCADE Suite-based development process from system requirements to software integrated on the target
- Support for Safety Plan development and reviews of certification documents based on the Certification Kit
- Compiler verification preparation
